8:00 AM – 3:00 PM	Training & Mock ups
3:00 PM – 4:00 PM	Exam Preparation
4:00 PM – 5:30 PM	Exams (CDDC, CDDPM, CDDR)

(See seminar schedule for complete break out for each day)

Certifying Inspectors (CDDI), Consultants (CDDC), Project Managers (CDDPM) and Remediation Contractors (CDDR) in the Inspection, Quality Control, and Remediation of homes with Chinese and other defective drywall.

This conference will issue both nationally certified protocols and national warranties (currently under negotiation for \$100,000 to \$500,000 per structure) on all homes remediated under these protocols.

Inspectors (CDDI) who satisfactorily pass the exam will be given the certified protocols for inspection which includes the proposed national warranty which will likely be extended to homes without Chinese or other defective drywall for future resale purposes.

Consultants (CDDC) Project managers (CDDPM) and Contractors (CDDR) who satisfactorily pass the exams will be given the certified protocols for inspection and remediation with the proposed national warranty that, upon acceptance of the proposed warranty program, may be extended to homes that have been remediated of Chinese and other defective drywall.

BESI Memberships

Annual Fee \$200.00

How does the new Certified Drywall Inspection and Remediation Protocols work?

The certified protocols consist of four divisions.

Certified Defective Drywall Inspector (CDDI) - \$695.00 (includes 1st year of BESI Membership)

Individuals who have been pre-qualified and successfully pass the written exam are then certified to use the protocols for basic inspection on homes with or without defective drywall. The inspection can certify a home without defective drywall and offer the proposed national warranty upon peer review of the report. In the event that defective drywall is found, the inspector will be trained to properly document the conditions and certify that it has defective drywall in order for homeowners to seek compensation. Inspection protocols are computerized and peer reviewed to insure the protocol standards are followed prior to issuing any proposed warranties.

Certified Defective Drywall Project Manager (CDDPM) - \$795.00 (includes 1st year of BESI Membership)

Individuals who have been pre-qualified, work for a contractor and acting as the project manager for the contractor, successfully pass the written exam are certified to use the protocols as set forth by the institute. Certified project managers are trained in the remediation protocols which effectively remove, store, clean, and decontaminate the home as well as personal belongings through the specified protocols. Upon satisfactory completion of the remediation and third party inspection with peer review, the contractor can then certify the home and receive the national proposed warranties.

Certified Defective Drywall Consultant (CDDC) - \$995.00 (includes 1st year of BESI Membership)

Individuals who have been pre-qualified and successfully pass the written exam are then certified to use the protocols for all inspections on homes with or without defective drywall. A CDDC can also certify a home without defective drywall and will be able to offer the proposed warranty upon peer review of the report. CDDC are also certified to oversee remediation of all homes with Chinese drywall. They can certify, oversee, and sign off on the remediation protocols so that a proposed national warranty can be issued. CDDC is not tied to the contractor but represents the home owner, builder, bank or other parties having the building or home remediated. CDDC acts as a third party inspector to insure compliance to the standards in the protocols.

Certified Defective Drywall Remediator (CDDR) - \$1,295.00 (includes 1st year of BESI Membership)

Individuals who have been pre-qualified, hold current state license, are in good standing with the states board, and successfully pass the written exam are certified to use the protocols as set forth by the institute. Certified Remediators are trained in the remediation protocols which effectively remove, store, clean, and decontaminate the home as well as personal belongings through the specified protocols. Upon satisfactory completion of the remediation and third party inspection with peer review, the contractor can then certify the home and receive the national proposed warranties.

This Certification Program being offered through the Building Envelope Science Institute.

This is Not State or Government Sponsored Certification.
